IMPORTANT RULES FOR SAFE OPERATION

This symbol points out important safety instructions which, if not followed, could endanger the personal safety and/or property of yourself and others. Read and follow all instructions in this manual before attempting to operate your machine.

It is important that in operation and handling the machine, certain normal precautions be observed to prevent the possibility of injury or damage.

Please read the rules for safe operation before you disassemble or use your machine.

SAFETY PRECAUTIONS

This Extractor is designed to be safe when used to perform cleaning functions as specified. Should damage occur to electrical parts, the Extractor should be repaired by the manufacturer or competent service agency before using to avoid further damage to the machine or physical injury to user.

A damaged power cord could cause electrical shock and/or fire. To minimize this possibility, observe the following precautions:

- Do not run over power cord.
- Avoid closing doors on power cord, pulling it around sharp edges, or placing sharp-edged objects upon it.
- Wind cord no tighter than is necessary to retain it.
- When disconnecting power cord from electrical outlet, grasp the plug. Pulling out by the cord itself can damage cord insulation and internal connections to plug. Also, avoid damage to insulation by keeping cord away from oil and heat.
- Whenever possible, plug the Extractor into a wall outlet. Use of extension cord or light socket with inadequate current carrying capacity could result in electrical shock or fire

hazard.

- Switch power off before inserting or removing power cord from electrical outlet.
- Never store or transport the machine in below freezing temperatures.
- Do not use in areas where flammable and/or explosive vapor or dust is present to avoid possibility of fire or explosion. Some cleaning fluids can produce such vapors.
- Keep your work area well lighted to avoid picking up harmful materials and/or tripping accidents. Proper storage of machine in an out of the way area immediately after use will also prevent accidents caused by running into the unit.
- Store your Extractor indoors in a dry area not exposed to freezing or lower temperatures.
- Exercise strict supervision to prevent injury when using Extractor near children. Do not allow children to play or use Extractor and never leave it plugged in and unattended.

CUSTOMER RESPONSIBILITIES

Always use care when operating the machine. Keep clear of moving parts. Do not work on machine with power applied and observe the rules for safe operation. Keep the machine clean. Follow a regular maintenance and check schedule to provide efficient and safe operation. A well cared for machine will last longer and operate more efficiently. Always be careful for yourself and for others.

GENERAL INFORMATION

Your machine has been especially engineered and manufactured to give the maximum in performance in cleaning large carpeted areas.

With careful maintenance, according to the instructions outlined in the following pages, a high standard of operation throughout will be insured.

Carefully inspect all components to insure that there is no concealed freight damage. If such damage is discovered, file a "damage report" immediately with the delivering carrier.

The contents of this manual are based on the latest product information available at the time of publication. The right is reserved to make changes at any time, without notice, in price, color, materials, equipment, specifications and models.

SERVICE INFORMATION

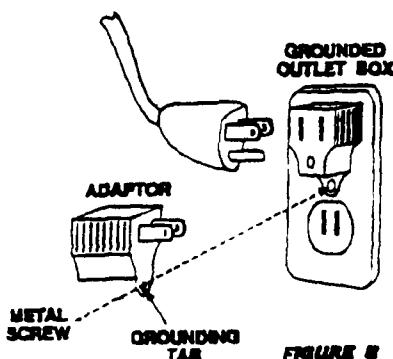

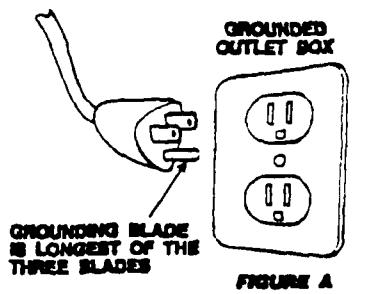

To obtain consistent performance over the life of your machine, read through these instructions and keep them handy for future reference. If you require service, contact the dealer from whom the machine was purchased, or the local authorized Kent service agency. Always refer to your Kent limited warranty for complete service information.

The model, type and serial number are indicated on the data plate. For prompt and complete information, always refer to these numbers when inquiring about service.

GROUNDING INSTRUCTIONS

This appliance must be grounded. If it should malfunction or break down, grounding provides a path of least resistance for electric current to reduce the risk of electric shock. This appliance is equipped with a cord having an equipment grounding conductor and grounding plug. The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.

DANGER

Improper connection of an equipment grounding conductor can result in risk of electric shock. Check with qualified electrician or service person if you are in doubt as to whether the outlet is properly grounded. Do not modify the plug provided with the appliance. If it will not fit the outlet, have proper outlet installed by a qualified technician. This appliance is for use on a nominal 120 volt circuit and has a grounding plug that looks like the plug illustrated in Figure A. A temporary adaptor which looks like the adaptor illustrated in Figure B may be used to connect this plug to a two pole receptacle, as shown, if a properly grounded outlet is not available. The temporary adaptor should be used only until a properly grounded outlet, Figure A, can be installed by a qualified electrician. The green colored rigid ear, lug, or the like extending from the adaptor must be connected to a permanent ground such as a properly grounded outlet box cover. Whenever the adaptor is used, it must be held in place by a metal screw.

CARPET EXTRACTOR CONTROLS

VACUUM SWITCH - Turns on vacuum motor. The recovery tank instantly operates under vacuum conditions, and the floor nozzle is capable of pick-up (extraction). As expected, one must have the tank slide drain valve closed and the tank lid in position over the tank sealing gasket.

PUMP SWITCH (HANDLE) - Turns on solution pump. This pump draws filtered solution water from the solution tank and pumps it to the nozzles located beneath the frame. The nozzles distribute the solution evenly over the carpet. Water temperature in the solution tank must not exceed 130 degrees F. Releasing this switch will shut off the pump only if the pump panel switch is off.

BRUSH SWITCH - Starts brush agitation. Rotation of brush may start to propel machine in correct direction of travel which is rearward. This is a desirable feature for ease of operation. Different carpeting may change the effort required to operate the machine.

BRUSH SWITCH (PANEL) - Turns on solution pump. This pump draws filtered solution water from the solution tank and pumps it to the nozzles located beneath the frame. The nozzles distribute the solution evenly over the carpet. Water temperature in the solution tank must not exceed 130 degrees F. This switch will keep the pump on continually.

OPERATION

The filler neck where cleaning solution is added to the machine is under the domed cover. Raise the cover to expose fill neck and pour in cleaning ingredients. Water temperature must not exceed 130 degrees F.

Plug the power cord into a 115V outlet. The power indicator light on the panel will glow. Operate the controls according to instructions given in previous paragraphs. The cleaning path will be 12" or 18" wide depending on the model number of your machine. Overlap the strokes, and proceed at a slow, steady rate.

Extracted dirt and fluid are visible thru the domed cover. When the recovery tank becomes too full, release the handle pump switch to prevent wetting the carpet unnecessarily. Also, turn off the brush motor. Use the dump valve knob only to dump the recovery tank contents into a suitable receptacle.

CAUTION NOTE: Use non-foaming chemicals only. If a malfunction such as overflow of the recovery tank should occur, immediately shut off the vacuum motor, and pull the power cord plug from the wall. In no case should solution water be allowed to enter the vacuum port leading to the vacuum motor. Clean debris away, or correct problem that has caused this to happen.

MAINTENANCE

Clean the recovery tank at the end of each day, and leave covers off until next use, or until tanks are dry to prevent tank odors.

Clean fibrous material from underneath machine, and from areas of moving parts in recovery tank.

Replace a power cord that has become damaged.

RECOMMENDED

SPARE PARTS

The following list of parts should be kept on hand in order to avoid downtime of your machine due to a failure or breakage.

SERVICE DIAGNOSIS - TROUBLESHOOTING CHECKLIST

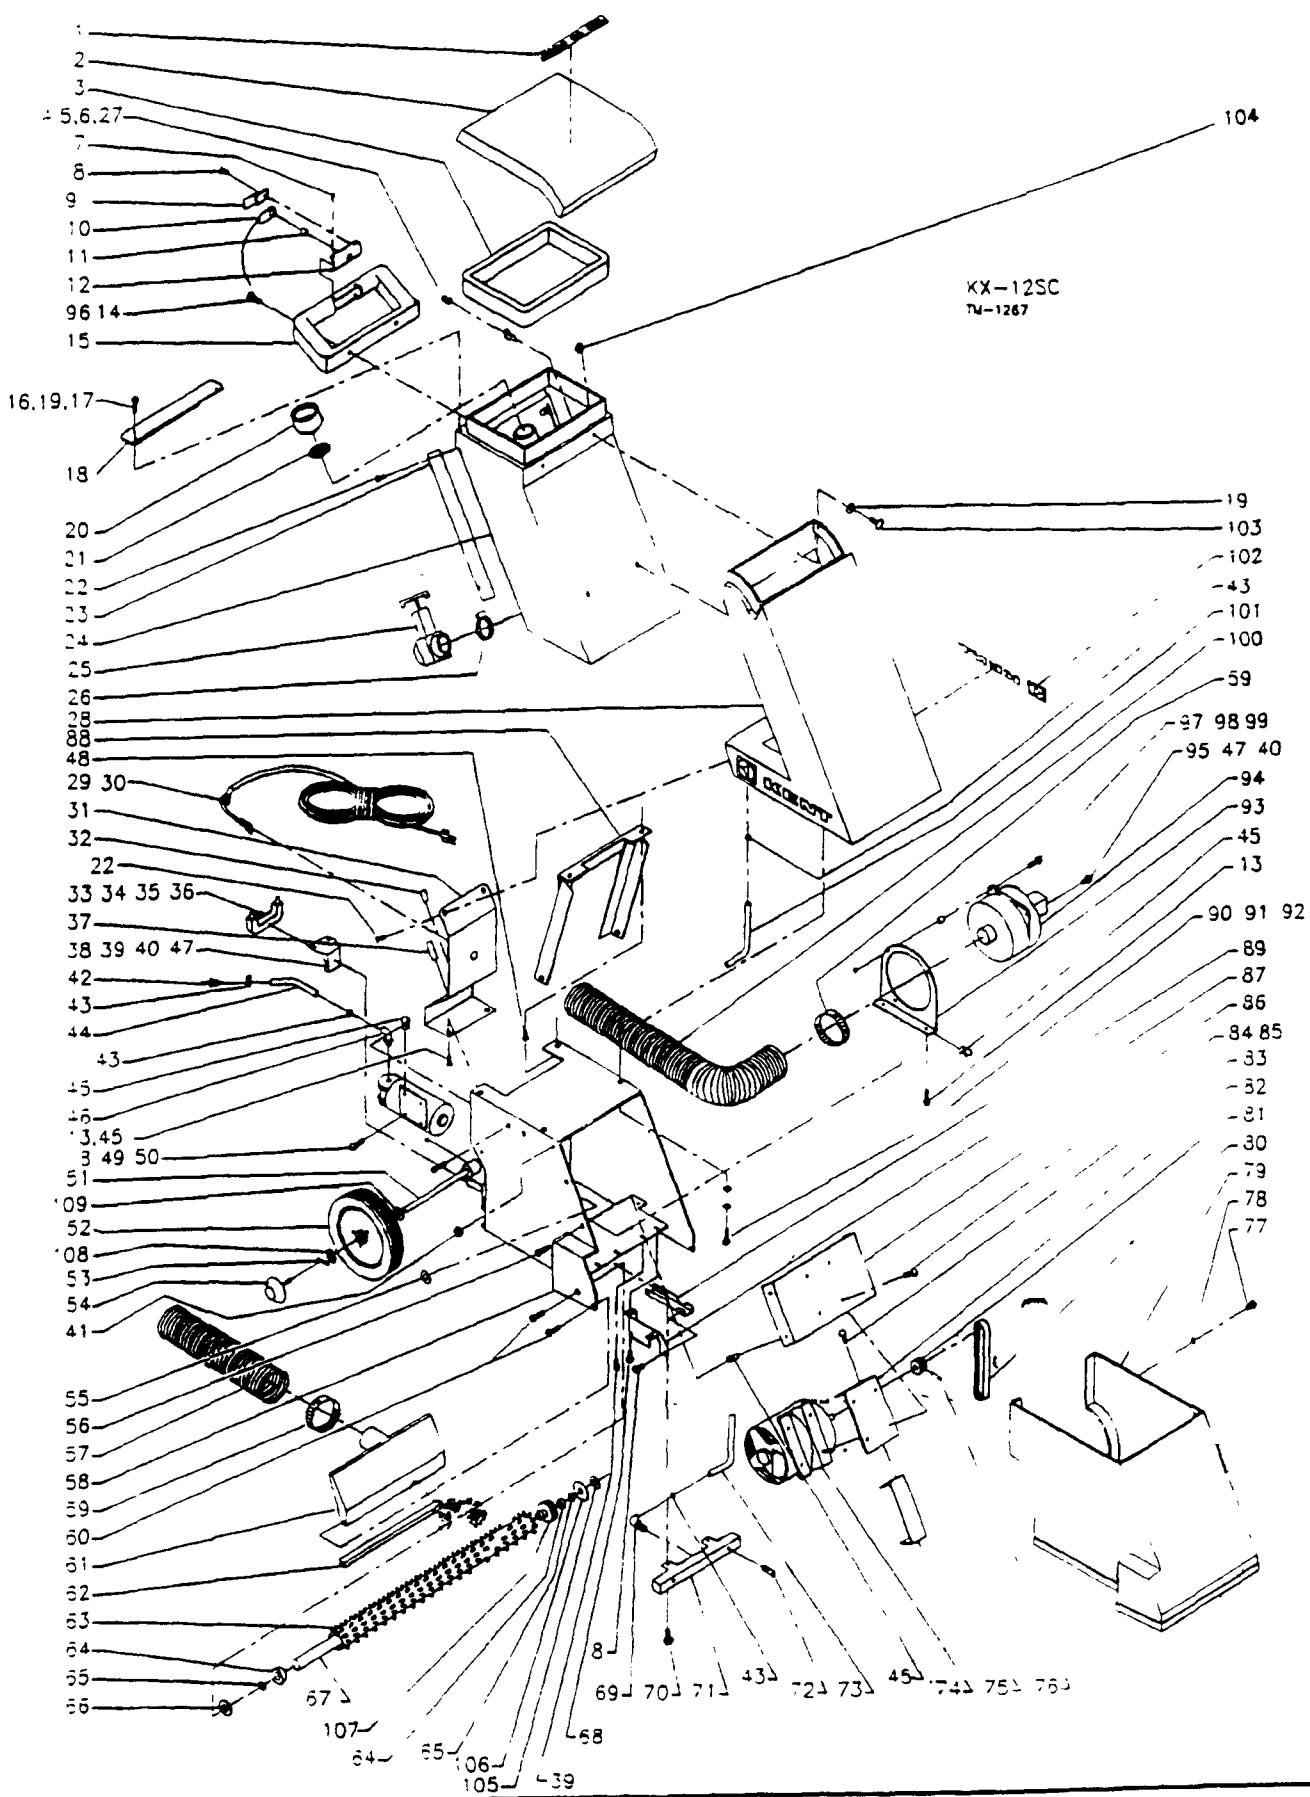

PROBLEM

- | PROBLEM | CORRECTION |
|--|--|
| A. Belt squeaks. | <ol style="list-style-type: none">1. When brand new, tip the machine slightly back to start for the first minute or two of extraction. The brush fibers will take a set that diminishes belt load.2. If adjustment is necessary, remove cover and turn the belt takeup screw to the right until tight. |
| B. Water leaks thru nozzles while the machine is off. | <ol style="list-style-type: none">1. The manual check valve in the KX-12SC needs cleaning or replacing.2. The check valve in the KX-12SCA & KX-180 needs cleaning or replacing. |
| C. No solution thru nozzles when the pump switch is depressed. | <ol style="list-style-type: none">1. If the pump is running the fault is clogged hoses, filters, nozzles or check valve.2. If the pump will not run check the switch or wiring for failures before replacing the pump.3. No solution in tank. |
| D. Uneven solution spray pattern. | <ol style="list-style-type: none">1. Nozzle, nozzle tip or nozzle filter has lime or soap buildup. Unscrew the nozzles and clean in vinegar. Do not use a sharp, hard object to scrape or punch thru the nozzle opening. Enlarging orifice could be costly, waste water and result in product rejection. |
| E. Rug stains. | <ol style="list-style-type: none">1. Stains may remain after common dirt and food particles are extracted from rug. To prevent this, carefully pretreat petroleum and other stains using recommended chemicals and methods before extracting.2. Spray jets or tips are probably worn. Replace jets or tips and align so the spray is in a straight line. |
| F. Carpet soaks up water-little water recovered. | <ol style="list-style-type: none">1. Vacuum loss due to vac motor failure.2. Vac loss due to gasket leakage.3. Vac loss due to loose hose connection or suction nozzle obstruction.4. Lint on top of standpipe screen. (#21) Remove cover and clean lint off screen.5. The drain valve is open or leaking.6. Vac loss due to holes in the hose. |
| G. Water or foam entering vacuum port. | <ol style="list-style-type: none">1. Overfilled recovery tank.2. Leakage of tube connections.3. Used chemical producing too much foam, use defoamer. |
| H. Indicator light not lit. | <ol style="list-style-type: none">1. Cord is not plugged in.2. Power source is dead. (This machine does not have a breaker/fuse.)3. Burned out light. |

- I. Leaky drain valve.
 - 1. There is probably lint or dirt in the valve. Clean but if the gate is worn, the valve may need replacement.
- J. Brush motor runs but brush doesn't spin.
 - 1. Loosen pulley on brush. Re-tighten pulley screw or brush.
 - 2. Loosen pulley on motor. Broken roll pin. (#76)
 - 3. Broken belt or belt too loose.
