

LIGHTNING Stripper

WINDSOR

PROPANE POWERED STRIPPER

Operating Instructions

MODELS: LS24

QUEST® ... for Continuous Improvement.
Windsor's Quality Management System is Certified ISO 9001.

Read these instructions before using the machine

IMPORTANT SAFETY INSTRUCTIONS

The following symbols are used throughout this guide as indicated in their descriptions:

HAZARD INTENSITY LEVEL

There are three levels of hazard intensity identified by signal words – **WARNING** and **CAUTION** and **FOR SAFETY**. The level of hazard intensity is determined by the following definitions:

WARNING – Hazards or unsafe practices which COULD result in severe personal injury or death.

CAUTION – Hazards or unsafe practices which COULD result in minor personal injury or product or property damage.

FOR SAFETY: To identify actions which must be followed for safe operation of equipment.

Report machine damage or faulty operation immediately. Do not use the machine if it is not in proper operating condition.

Following is information that signals some potentially dangerous conditions to the operator or the equipment. Read this information carefully. Know when these conditions can exist. Locate all safety devices on the machine. Please take the necessary steps to train the machine operating personnel.

For SAFETY:

DO NOT OPERATE MACHINE:

- **Unless Trained and Authorized.**
- **Unless Operation Guide is Read and understood.**
- **Never run engine in a closed building or confined area.**
- **In Flammable or Explosive area.**
- **In areas with possible falling objects.**

WHEN SERVICING MACHINE:

- **Avoid moving parts. Do not wear loose clothing; jackets, shirts, or sleeves when working on the machine.**
- **Use Windsor approved replacement parts.**

NOTICE:

OIL ALERT BUZZER

The "OIL ALERT" buzzer will warn you before the engine oil falls below the safe operating limit. If the buzzer sounds, stop the engine immediately and add oil.

The buzzer indicates insufficient oil. Running the engine with insufficient oil can cause serious engine damage.

WARNING: Lethal Exhaust Gases

Engine exhaust gases contain poisonous carbon monoxide. Carbon monoxide is odorless, colorless, tasteless, and can cause death if inhaled. Avoid inhaling exhaust fumes and never run the engine in a enclosed building or confined area without proper ventilation.

Although LPG burns more efficiently and emits less carbon monoxide than gasoline, some carbon monoxide is produced. Avoid inhaling exhaust gases – especially over prolonged periods of time.

To reduce the risk of fire, electric shock, or injury:

1. **Use** only as described in this manual. Use only manufacturer's recommended attachments.
2. **Use** indoors only. Do not use outdoors and do not expose to rain.
3. **Machine can cause a fire** when operating near flammable vapors or materials. Do not operate this machine near flammable fluids, dust or vapors.
4. This machine emits **lethal exhaust gas**. Ensure the working area is well ventilated.
5. Keep hands, feet, strings and ties from all moving parts while the machine is in operation.
6. The **exhaust system gets very hot**, keeps hands, clothing and any items that can burn away from the engine while hot.
7. **Do not** allow engine to run unattended.
8. **Do not** leave the machine unattended. Turn machine off when not in use and **before** servicing.
9. If the machine is **not working properly**, has been dropped, damaged, left outdoors, or dropped into water, return it to an authorized service center.
10. **Do not** allow to be used as a toy. **Close attention** is necessary when used by or near children.
11. **Do not** operate machine with any opening blocked. Keep openings free of debris that may reduce air flow.
12. **Keep** hair, loose clothing, fingers, and all parts of the body away from openings.
13. **Do not** use machine as a step.

SAVE THESE INSTRUCTIONS

OPERATING INSTRUCTIONS AND STARTING PROCEDURES

Thank you taking the time to select the best propane powered floor care equipment being manufactured today. Windsor machines are built tough and durable, however do not abuse the machine. With proper care and maintenance, this machine will give you trouble free operation for years to come.

Before and operation should begin, you first should read your Engine Operation Manual and your Owner's Manual.

OPERATING INSTRUCTIONS

Your machine is shipped ready for your operation, however there is no fuel in the tank. When having the tank filled you must make sure the tank is never filled. The best way to do this is to tell the filling station to weigh the tank full. On an aluminum tank, it should weigh no more than 36 pounds and on a steel tank no more than 43 pounds.

Adjustable Handle: Adjust the handle for comfortable operation. Use two 3/4" wrenches and loosen handle. Adjust to comfortable height and re-tighten bolts to 40 – 50 ft/lbs.

Check Oil Level: The importance of checking and maintaining the proper oil level in the crank case cannot be overemphasized. Check oil **before each use** as follows:

1. Make sure the engine is stopped, level, and cool so that the oil has had time to drain into the sump.
2. To keep dirt, spraybuff, wax, etc. out of the engine clean the area around the oil fill cap/dipstick before removing it.
3. Unthread and remove the oil fill cap/dipstick: Wipe oil off. Reinsert the dipstick into the tube and rest the oil fill cap on the tube. Turn the cap clockwise and withdraw it again to take the reading.
4. Remove the dipstick and check the oil level. The oil level should be up to, but not over, the "F" mark on the dipstick.
5. If the level is low, add oil of the proper type, up to the "F" mark on the dipstick. Always check the level with the dipstick before adding more oil.

Note: To prevent extensive engine wear or damage, always maintain the proper oil level in the crankcase. Never operate the engine with the oil level below the or above the limit mark on the dipstick.

Connect Fuel Hose: Connect fuel hose to tank by screwing the hose fitting to the tank. You must tighten all the way down to make fuel connection. Turn tank knob slowly until you hear flow of fuel into fuel system.

STARTING PROCEDURES

The engine is furnished with a 110 volt AC starting motor and push button starting switch.

The 110 volt system is plugged into a standard 3 prong 110V AC receptacle for starting. The engine also has a retractable starter for manual starts when AC is not available.

Note: If buffer unit does not have a clutch to disengage load, push handles down to raise buffer pad off the floor for starting. Keep hands and feet away from turning pad.

For a 110 volt AC starting motor only:

1. Check Oil Level.
2. Plug 110 Volt Starter Cord Into Ac Receptacle.
3. Set Throttle Cable To The Choke Position.
4. Open Tank Valve To The Open Position.
5. Push Both Primer Buttons.
6. Push Starter Button Until Engine Starts (No Longer Than 10 Seconds).
7. When Engine Starts, Move Throttle Cable To The Slow Position.
8. Unplug Starter Cord From AC Receptacle.
9. Move Throttle Control Position To Desired Speed.

REWIND STARTER PROCEDURE

Pull the starter grip lightly until resistance is felt then pull briskly.

STOPPING AND MAINTENANCE PROCEDURES

STOPPING ENGINE

Turn fuel valve on LPG tank to full closed position and allow the engine to continue running until it runs out of fuel.

In an emergency, hold down throttle cable to the stop position.

NOTE: Backfiring may occur when using the emergency stop method.

MAINTENANCE PROCEDURES

Honda Engine: Read Owner's Manual

Good maintenance is essential for safe, economical and trouble free operation. It will also help reduce air pollution.

Daily or Before Starting Engine:

- Check Oil Level (Add If Necessary)
- Check Air Filter (Replace If Necessary)
- Check Cooling Air Filter
- Check Fuel Hoses
- Check Belt Tension and For Loose Nuts & Bolts
- Check Engine Cooling Fins

First Month or 20 Hours:

Change Engine Oil (use SAE30 API Service Classification SH Minimum)

Every 3 Months or 50 Hours:

Change Engine Oil
Change Air Filter

Every 6 months or 100 Hours:

Check and Adjust Spark Plug (gap @.020)
Clean Spark Arrestor

Every Year or 300 Hours:

Replace Air Filter and Pre-Air Filter (190038/190012)
Replace Spark Plug (190015)
Check and Adjust Idle Speed and Valve Clearance

CO DETECTOR AND TANK STORAGE

“CO” - CARBON MONOXIDE DETECTOR (Part number: 191125)

The “CO” carbon monoxide detector detects carbon monoxide before it reaches dangerous levels. This detector is a must for those who run propane powered equipment in or around enclosed areas.

The CO Detector Is For Everyone’s Protection
Against Carbon Monoxide Poisoning

The detector is effective For 30 Days After
Package Has Been Opened

Mount With Self Adhesive Strip On The Side Of
Your Handle Or Locate It Around The Operator’s
Collar

**If The Orange Disk On The Detector Changes
To Gray Or Black - Your Carbon Monoxide
Levels Are At A Dangerous Level**

If the orange disk changes to gray or black you must turn your buffer off immediately and return it to your nearest authorized engine service technician for an emissions test. Do Not Restart the buffer or stripper until the emissions have been checked and corrected.

For replacement CO detectors, contact your Windsor Inc. distributor for availability and pricing.

This is for your protection as well as your customers. A must for safe operation and maximum efficiency on your equipment.

TANK STORAGE AND MAINTENANCE

The Worthington gas cylinders designed for vapor withdraw. The fuel lockoffs, regulators, and engines are also designed for vapor withdraw. “Fuel freeze-ups” or “frozen regulators” are a result of liquid propane being introduced into the system. To prevent these “freeze- ups” from occurring follow this important procedure:

1. Always store tanks in the upright position (valves up) outside and in a well ventilated area.
2. Do not overfill - the best gauge is a scale - never allow tank to weigh over 36 pounds for aluminum tank and 43 pounds for a steel tank.

FRAME ASSEMBLY PARTS

LIMITED WARRANTY

Windsor Industries, Inc. warrants new machines against defects in material and workmanship under normal use and service to the original purchaser. The warranty period is subject to the conditions stated below.

3 YEARS FOR PARTS AND 1 YEAR FOR SERVICE LABOR

Exceptions: Rotationally molded polyethylene tanks carry a **6 year** parts and 1 year service labor warranty. VERSAMATIC® models carry a 3 year warranty on brush motors, vacuum motors, and belts, and a 1 year service labor warranty. SENSOR® models carry a 2 year warranty on vacuum motors and belts, and a 1 year service labor warranty. Extractor brush motors, pump motors, pc boards and electronics, vac motors (other than VERSAMATIC® and SENSOR®), pumps, and FLEXSOL™ diaphragms, all RADIUS™, all ACCESS™ and TITAN™1 carry a 1 year parts and service labor warranty. Propane equipment has a 1 year parts and service warranty. The Onan® engines have a 3 year manufacturers' warranty. The Honda® engines have a 2 year manufacturers' warranty. The engine warranty is administered through the engine manufacturer and must be repaired at an authorized service center.

Normal wear items including, but not limited to, belts, brushes, capacitors, carbon brushes, casters, clutches, cords, filters, finishes, gaskets, hoses, light bulbs, rectifiers, switches, squeegees, bearings, pulleys, relays, actuating cables, tires and wheels will be warranted for manufacturing defects for 90 days from the purchase date.

The warranty commences on the purchase date by the original end user from an authorized Windsor Agent, subject to proof of purchase. The Machine Registration Card must be completed and returned immediately at the time of purchase. If proof of purchase cannot be identified, the warranty start date is 90 days after date of sale to an authorized Windsor distributor. Parts replaced or repaired under warranty are guaranteed for the remainder of the original warranty period.

90 DAY WARRANTY EXTENSION AVAILABLE

Upon receipt of the Machine Registration Card, Windsor will extend the warranty period an additional 90 days from the purchase date. Does not include items warranted 90 days for manufacturing defects.

STATED WARRANTIES ARE IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED.

Any statutory implied warranties, including any warranty of merchantability or fitness for a particular purpose, are expressly limited to the duration of this written warranty. Windsor will not be liable for any other damages, including but not limited to indirect or special consequential damages arising out of or in connection with the furnishing; performance, use or inability to use the machine. This remedy shall be the exclusive remedy of the buyer.

This warranty shall not apply to: 1.damage in transit; 2.misuse or abuse(including the use of incompatible or corrosive chemicals or overloading of capacity); 3. failure due to lack of proper maintenance and care (including cleaning); 4.any design alterations performed by an organization not authorized or specified by Windsor; 5.batteries and chargers. 6. high pressure washing. 7.electrical components exposed to moisture.

If difficulty develops during the warranty period, contact the authorized Windsor Agent from whom the product was purchased. Windsor, Inc. may elect to require the return of components to validate a claim. Any defective part to be returned must be shipped freight pre-paid to an authorized Windsor Distributor/Service Center or to the Windsor factory.

USE OF PARTS NOT APPROVED BY WINDSOR, INC. WILL VOID ALL WARRANTIES.

This warranty is valid only for all products sold after July 1, 1995. A product sold before that date shall be covered by the limited Warranty in effect at the date of sale to the original purchaser.
