ADJUSTMENTS AND INSPECTIONS

Check electrical equipment

- check functionality electrical equipment:
 - brush motor (the motor starts pushing both **brush switch** and **control lever**)
 - suction motor (the motor start pushing the **suction switch**)
 - solenoid valve (it starts pushing both **solenoid valve switch** and the **control lever**)
- check the functionality of the **display** in the middle of the instrument board:
 - it indicates the battery charge (4 = full, 0 = empty, brush motor off)
- Check the tightness of the **power contacts** into the electric box situated on the front side of the machine (behind the metallic cover down the solution tank).
Check the wear and the right contact of the **thermal breakers**

Check the water system

- Full the solution tank and check the tightness of the tubes and gaskets on the **cock** and **solenoid valve**.
- check that the water flow on the floor is uniform and at the cock opening. In any case check the cleaning of the cock.
- Check the **quick coupling**

4. If there are splashes or the water on the floor is not uniform, check the right position of the water **tube** in the middle of the brush.

Check the suction system

1. Check the cleaning and functionality of the **filter with ball**.
2. Check, if closed, the tightness of the **cap** of the recovery tank, verifying the good wear of the **gaskets** of the muffs.
3. Check the right position and tightness of the **muffs** on the recovery tank cap.
4. check the good wear of the squeegee rubber and the good tightness of the **knobs** of the squeegee support
5. If the squeegee lifts when it turns try to unscrew the **nut** of the squeegee spring to set it lightly free. The standard position is at thread.
6. Verify that there is a little clearance

Final test

Check all functions: cleaning, drying.
